## SKILLS

|                         |                                                                                                                              |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------|
| <b>Languages:</b>       | C++, Python, C, Java                                                                                                         |
| <b>Tools/Platforms:</b> | Cisco Packet Tracer, Wireshark, Metasploit, Nmap, Kali Linux                                                                 |
| <b>Soft Skills:</b>     | Communication Skills , Problem-Solving Mindset , Teamwork & collaboration ,<br>Self-learning ability , Professional Attitude |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                |         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| <b>Internal Network Penetration Testing Lab   <a href="#">Project Link</a></b>                                                                                                                                                                                                                                                                                                                                                                 | Feb' 26 |
| <ul style="list-style-type: none"><li>Designed and executed a simulated internal penetration test using Kali Linux and Metasploitable to assess system vulnerabilities.</li><li>Performed network scanning and service enumeration using Nmap to identify exposed services and outdated software.</li><li>Exploited a vulnerable FTP service using Metasploit, achieving remote shell access and privilege escalation to root level.</li></ul> |         |
| <b>OSINT Recon Automation Tool   <a href="#">Project Link</a></b>                                                                                                                                                                                                                                                                                                                                                                              | Feb' 26 |
| <ul style="list-style-type: none"><li>Built an automated OSINT reconnaissance system to gather domain intelligence using WHOIS analysis and subdomain enumeration.</li><li>Developed modules for structured data collection, report generation, and SQLite database logging.</li><li>Implemented automation workflows to streamline reconnaissance processes and reduce manual analysis time.</li></ul>                                        |         |
| <b>Python Multi-Threaded Port Scanner   <a href="#">Project Link</a></b>                                                                                                                                                                                                                                                                                                                                                                       | Feb' 26 |
| <ul style="list-style-type: none"><li>Developed a concurrent port scanning tool using Python sockets and multi-threading for fast network reconnaissance .</li><li>Implemented real-time detection of open ports and service responses across target systems.</li><li>Strengthened knowledge of TCP/IP networking, socket programming, and system enumeration techniques.</li></ul>                                                            |         |
| <b>Network Packet Sniffer   <a href="#">Project Link</a></b>                                                                                                                                                                                                                                                                                                                                                                                   | Feb' 26 |
| <ul style="list-style-type: none"><li>Designed a real-time packet monitoring tool using Scapy to capture and analyze live network traffic.</li><li>Implemented detection for TCP, UDP, ICMP, and ARP protocols with source/destination tracking.</li><li>Applied packet inspection techniques to understand network communication behavior and threat patterns.</li></ul>                                                                      |         |

## INTERNSHIP

|                                                                                                                                                                                                                                                                                                                                                          |                  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>Next Gen Networking (Lovely Professional University)</b>                                                                                                                                                                                                                                                                                              | Jun' 25 – Jul'25 |
| <ul style="list-style-type: none"><li>Gained practical exposure to network design, simulation tools, and real-world device configuration.</li><li>Developed confidence in planning, designing, and managing small to medium networks.</li><li>Built professional skills such as problem-solving, logical thinking, and technical communication</li></ul> |                  |

## CERTIFICATES

|                                                                                            |        |
|--------------------------------------------------------------------------------------------|--------|
| Google Cyber Security Professional Course  Coursera   <a href="#">Certificate Link</a>     | Oct'25 |
| TCP/IP and Advanced Topics   Coursera   <a href="#">Certificate Link</a>                   | Dec'24 |
| The Bits and Bytes of Computer Networking  Coursera   <a href="#">Certificate Link</a>     | Dec'24 |
| Peer-to-Peer Protocols and Local Area Networks  Coursera  <a href="#">Certificate Link</a> | Dec'24 |

## EDUCATION
